

## ABSTRACT

The invention relates to the herbal extract having anti-viral activity. More specifically, it relates to the herbal extract produced by extracting the comminuted fruit of *Fructus Ligustri Lucidi* ( privet fruit ) , *Rhizoma Polygonati* ( sealwort ) , *Herba Agrimoniae* ( agrimonia ) , *Radix Rehmanniae Glutinosae Conquatae* (steamed glutinous rehmannia) or the mixture thereof, with a low polar solvent, and to the method for in vitro antagonizing virus by contacting the herbal extract with viruses.
